

## Full Public release for Offline Editor

### Version G3.4.4 (25 May 2018)

This document constitutes a formal release of Offline Editor software for full public usage.

This build can be made fully available to the public

#### ADDRESSED ISSUES

- Fixed issue which required internet connection to start application on recent version of MacOS
- Fixed issue which prevented some channels to be linked in Pro X version
  - This issue could cause problems when importing a show with these channels linked

#### ADDITIONAL INFORMATION

##### How to install the offline editor on OSX

1. Copy the file to an Apple Macintosh computer
2. Double-click the file
3. Accept the license agreement
4. Then drag the Midas Offline Editor icon onto the “Drop here to install” icon
5. The program is then automatically installed and can be clicked to start it

##### How to install the offline editor on OSX

- Apple Mac with OSX 10.11 (El Capitan) or above
- 4GB RAM
- 500MB HDD available

#### OPERATIONAL CONSIDERATIONS

- Please ensure you Mac settings are configured to allow third party applications to be installed
- If application fails to launch first time running program - please try the following
  - Use secondary click (right click) on the Offline Editor in the Application folder
  - Select “Open” from drop down menu
  - In the pop-up warning box - click “Open” again
  - Application can be launched normally from now on
