WING-EDIT V1.2.

Release 2023-10-08

The screenshot displays the WING-EDIT V1.2 software interface. The main window is titled "WING Edit [JD-Wing, IP: 192.168.178.87]". The interface is divided into several sections:

- Left Sidebar:** Contains navigation buttons (HOME, MIXVIEW, EFFECTS, METERS, ROUTING, SETUP, MONITOR, ASSIGN) and a mixer section with faders and solo buttons for channels CH 1-16, CH 17-32, CH 33-40, and CH 1-40. It also includes a "SURFACE" section with "L C R" buttons and a "USER 1" / "USER 2" section with "MUTE" buttons.
- Central Area:** Features a "SESSIONS" list for "SD CARD 1" and "SD CARD 2". The "SD CARD 1" sessions include "5sTestfile" (17:03:48), "2019-10-05" (20:46:00), and "Paul Examn" (20:24:24). The "SD CARD 2" session is "1" (2000-00-00, 00:00:00). Below the sessions are two waveform displays for "16 CH" and "32 CH" with recording time indicators (e.g., "00h 07m 16s 10").
- Right Sidebar:** Contains "MONITOR / LR" settings (DIM, MONO, MUTE), "OUTPUT" settings (Phones, Speaker), "TALKBACK" settings, and a "Mute Groups" section with buttons for M1-M4 and MUTE.

Overview

WING EDIT is the fantastic on- and off-line editor that provides you with comprehensive remote control and intuitive show preparation for your Behringer WING console.

Version 1.2 is offering complete remote control for the WING-LIVE Multitrack SD Recorders, featuring 2 independent but linkable 32-track recorders. New User Patches, allow to combine arbitrary sources into a stereo pair for special channel input combinations. Console fader surface can now be configured remotely from WING-EDIT. Cheers to Martin!

NOTE: The WING EDIT app is compatible with WING **FW 2.0** or higher

Application Software Release

Versions for Windows PC, Mac OS, Linux and Raspberry Pi

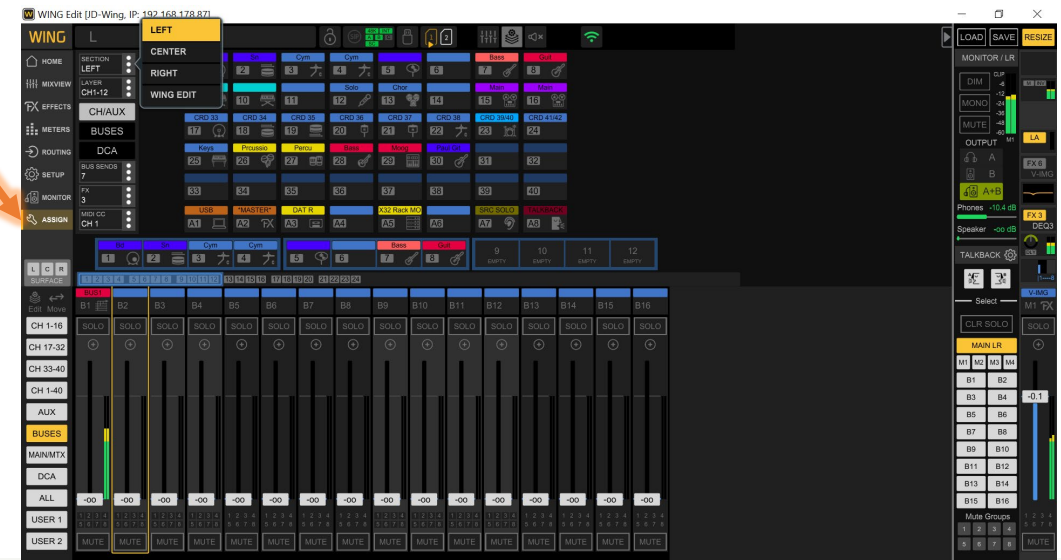

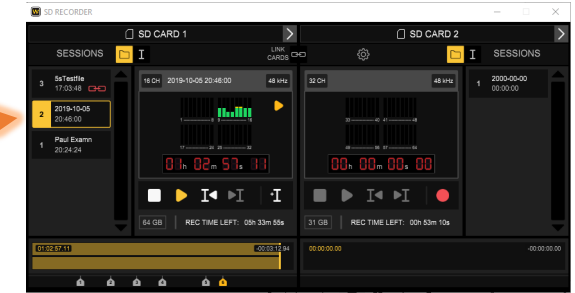

WING-EDIT V1.2.

Release 2023-10-08

Bugfixes

- Fixed handling for internal wing module (Dante/WSG)
- Updated curve calculation for DEQ, TRIPLE DEQ and SPEAKER MANAGER

Disclaimers

- **NOTE:** *The fw 2.0 has changes on the remote-control API and must be used with the recent app versions: WING CoPilot mobile app minimum version 1.12 and WING-EDIT application for PC/Mac/Linux 1.2. Previous CoPilot versions will not be fully compatible with WING fw 1.13 or higher.*
- **NOTE:** *Fw 2.0 will require stagebox firmware updates for supporting HA remote control and the use of WING on both sides (AES50 A and B) of the stagebox. We plan releasing those updates in the next coming weeks and suggest only using WING on the stagebox' A-ports until then. Using X/M32 series products on A- and B-ports is no issue, however.*
