

## iW 62 BACKCAN

### Pre-Install backcan for iW 62DS-WH and iW 62S-WH In-Wall Loudspeakers

#### IN WALL INSTALLATION

- 1 Using screws that are at least  $\frac{3}{4}$ " long, affix backcan to studs or joists. Tannoy recommends a minimum of 8 screws.
- 2 Run appropriate gauge and type of wire for your particular installation to the backcan location.  $\frac{1}{2}$ " or  $\frac{3}{4}$ " conduit is also an option.
- 3 Install a suitable connector for wire chosen into the  $\frac{1}{2}$ " or  $\frac{3}{4}$ " knock out. Run wire through connector, leaving enough length to reach the loudspeaker with excess for ease of connection.
- 4 Leave excess wire in the backcan until drywall or desired finishing is complete.
- 5 The flange on the front of the backcan will protrude through the drywall and act as a guide for drywall installation.
- 6 After desired finishing is complete, connect the previous installed wire in the backcan to the red (+) and black (-) terminals on the chosen loudspeaker model. An optional ground wire may be used to reduce RF interference.
- 7 Follow installation instructions found in the loudspeaker quick start guide for final speaker installation.
