Delay comes in many different flavors, and the ECHO MACHINE EM600 gives you access to a vast palette of delays all in one amazing stomp box. The EM600 features our Real Sound Modeling (RSM) technology for amazing audio quality and a full host of controls to give you the final word on your tone.

### What is Delay?

Delay is a synthetic echo that in adjustable increments, repeats the notes you play. Each repeated tone becomes quieter than the previous one, until the repeats are no longer heard. This results in a thick, robust sound that can take on everything from the quick “slap” echo of classic rockabilly to the long, dreamy echoes found in psychedelic rock.

### Multiple Personalities

The EM600 is virtually 11 unique delay effects in one pedal: Ping Pong, Reverse, 2 different multi-delays, Tracking, Sweep, Swirl, Slap and 3 different tap modes. **BEHRINGER** Real Sound Modeling technology gives this pedal the ability to emulate the acoustics of a variety of environments. Produce realistic cathedral-like echo in your bedroom or cave-like echo at the corner bar. Our RSM technology makes it possible!

### It's Easy

You can choose to give the effect a digital, analog or tape delay feel via a dedicated switch. You can also choose to put lush, psychedelic tails behind every note you play, or a more abrupt delay that fades quickly. Sculpt it into a truly unique delay by twisting the EM600's dedicated Mix, Time, Repeat and Modulation dials. There's even a Tap function that allows you to dial in the delay tempo by rhythmically tapping the footswitch. You can power the EM600 with a 9 V battery or our PSU-SB DC Power Supply (not included).
