Infuse your playing with the mind-bending sound of a jet plane in full-tilt power dive mode with you at the controls – with the SUPER FLANGER SF400 stomp box! From vintage to modern, from subtle to severe, the SF400 lets you explore the entire history of popular flanging effects in one convenient and affordable compact box.

What is Flange?

Flanging occurs when two identical signals are mixed together, but with one signal delayed by a small, gradually changing amount. In layman's terms, it makes your guitar sound something like a vintage rotary speaker, but by adjusting certain parameters of the effect, it becomes syrupy and psychedelic. This effect is prominent in many landmark '70s rock recordings, and is still widely used to this day.

Superior Sound

The SF400's Real Sound Modeling (RSM) technology delivers clarity and natural tonality for a flanging capability that is nothing short of spectacular. From a subtle sonic garnish to a deep, trippy flange, the SF400 delivers a stunning array of flanging moods.

It's Easy

The SF400 has 4 unique modes: Standard, Ultra, Gate/Pan and Momentary. Twist the Rate, Depth, Manual and Resonance controls to create your perfect flange effect, or use the Tap Tempo function to rhythmically control flange rate. A bright status LED shows you the power status and battery condition, and the durable footswitch preserves signal integrity in bypass mode. The SF400 pedal operates on a 9 V battery, as well as with our [Behringer PSU-SB DC power supply](#).
